Run protocol

1. The main menu is the starting point of the user interface. From here all other software functions can be accessed.
   The main menu can always be reached by pressing the 'home' icon.

2. From the 'start / play' icon (PROTOCOLS) in the main menu, the saved extraction protocols can be accessed and run.
   To run an extraction process, select a protocol from the list.

3. Load the consumables into their dedicated positions in the IndiMag 2. Make sure all sample positions contain correctly installed rod covers, before starting the protocol by pressing the 'play' icon.

4. After the run has started, the name and the progress of the running extraction protocol is displayed on the screen. A countdown displays the remaining time until the protocol/run is completed.
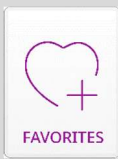

Table 1. Main menu overview.

Icon	Name	Functions
